

Container Fill Window - Shipment Tab

Clicking the Input Data tab goes back to the previous window.

Clicking the Container tab displays the selected container.

The purpose of this table is to select containers, pallets and boxes to view them in the drawing below and for changing the code and/or description of each item.

This drawing will show the selected container with a blue frame and the rest of them without frames. If a box or pallet is selected from the table above, it will only show the given box.

The shipment (group of containers) file can be exported using the Export -> Shipment -> File command from the File menu.
